

Meta Business Setup Guide

Create a Meta (Facebook) Business account, set up a Business Portfolio, verify the business, and give access to **rahmanvapu@gmail.com**.

Tip: You need a personal Facebook account to sign in with. Meta Business tools are managed through that login — there is no separate “business login”.

Step 1 — Create your Business Portfolio

1. Go to business.facebook.com
2. Log in with your personal Facebook account (or create one first at facebook.com).
3. Click Create account (top right) / Create a business portfolio.
4. Enter your business/portfolio name (public), your name, and a business email.
5. Click Submit / Create.
6. Open that email inbox and click the confirmation link Meta sends.

You now have a Business Portfolio (Meta’s newer name for Business Manager). All settings live in [Business Settings](#).

Step 2 — Fill in your business details

1. Open Business Settings → Business Info: business.facebook.com/settings/info
2. Fill in legal business name, registered address, phone number, and website.
3. Save. These must match your official documents — verification checks against them.

Step 3 — Verify your business

1. Go to Business Settings → Security Center: business.facebook.com/settings/security
2. Find Business verification and click Start verification.
3. Provide legal business name, address, phone number, and website.
4. Confirm the business — Meta matches your details against official/public sources.
5. Verify your connection — Meta sends a code by phone call, SMS, or business email; enter it.
6. Upload documents only if requested:
 - Business registration / incorporation certificate
 - Tax document, utility bill, or bank statement showing business name & address
7. Submit. Review usually takes a few minutes to a few business days.

Tip: The name, address and phone on your documents must match Step 2 exactly, or verification will be rejected.

Step 4 — Give access to rahmanvapu@gmail.com

The invited person needs a Facebook account that uses **rahmanvapu@gmail.com**. If it doesn’t exist yet, create it first at facebook.com.

1. Go to Business Settings → Users → People: business.facebook.com/settings/people
2. Click Add / Invite people.
3. Enter the email: **rahmanvapu@gmail.com**
4. Choose the access level:
 - Full control / Admin — can manage everything, or
 - Partial access / Employee — limited to assigned assets only
5. (Optional) Assign specific assets (Pages, Ad accounts, WhatsApp account) and set permissions.
6. Click Invite / Send request.

7. They receive an email invitation and must open it and click Accept to gain access.

Tip: If the invite email doesn't arrive, check spam or resend it — the pending invite shows under Settings → Users → People.

Users / People (add access)	https://business.facebook.com/settings/people

Notes for the GameOn WhatsApp integration

- Business verification is required before a WhatsApp Business API number can leave the limited tier and raise messaging limits.
- The WhatsApp Account appears as an asset under Business Settings once your WhatsApp app is connected — you can assign it to users in Step 4.
